BUG TRACEABILITY MATRIX REPORT - ADJUSTED VERSION			
TEST CASE ID	FEATURE TYPE	TEST CASE NAME	DEFECT DESCRIPTION
TC01	Registration	verify user registration denied with valid username input	Invalid feedback for not met username input requirement: - Minimum 2 characters ! - instead of that, 3 characters have been provided for user input field.
TC02	Registration	verify user registration with already registered password from another user	Detected security breach!
TC03	Registration	verify registration failed with cyrillic and english symbols for user without invalid feedback	No error checkmark was provided and registration failed!
TC04	Registration	verify user registration failed without invalid feedback for not met email requirement	No info for maxLength - email must be shorter than or equal to 20 characters. Green checkmark appeared for proper input(right of the field) instead of 'X' checkmark for unacceptable input.
TC05	Registration	verify registration form Sign in button is disabled	Disabled function of 'Sign in' button!
TC06	Registration	verify registration form Sign in button syntax is not correct defined and can mislead the user	Regarding the main purpose of registration form - 'Sign in' text can mislead the user, unless the revised version is accurate - 'Sign up'!
TC07	Registration	verify registration form email field name distinguishes from the rest of the fields	The proper syntax for 'email' field should begin with Capital letter, like the rest of the syntax fields.
TC08	Registration	verify registration success with non realistic user date of birth	Unacceptable system behaviour - user can register with fake profile and date of birth: 05/04/1905.
TC09	Registration	verify registration confirm password id syntax is not consistent with the primary password id	'Confirm Password' id syntax, relates to a phone number or a phone-related password, which would be misleading. Revised option is suggested, since the semantics goal is to maintain clarity and avoid confusion!

TC10	Login	verify user unable to lock the account with infinite wrong pass try	The user has infinite login authentication tries, until the the right credentials are provided, without account to be locked. Manual test with more than 100 attempts was executed as well and the main topic was proven!
TC11	Login	verify user can access private profile account with similar user and same pass inputs	Detected security breach - user can access private profile, after login with similar username input and same password credentials!
TC12	Post	verify user unable to create private post since the private button can not be selected	Private post checkbox is not active, can not be selected!
TC13	Post	verify that private and public post status checkboxes are not defined proper	Post status checkboxes are not correct define - they are radio buttons instead! There's no possibility post buttons to be selected at the same time, since checkboxes allow to choose items from a fixed number of alternatives, while radio buttons - exactly one item from a list.
TC14	Post	verify misleading class name for post status private checkbox syntax	Private checkbox syntax - the class name, suggests the element is related to a 'Public' status, yet the visible text shows 'Private'. This can cause confusion for developers working on the code, that may also lead to functional errors.
TC15	Post	verify return button syntax and provide txt for screen readers to keep visual consistent for UI	'Return' button is without any visual text for the user, recognizes it exists. Buttons semantically correct should be visible and clickable for user actions!
TC16	Post	verify that user is unable to click on return button since it can not be selected	'Return' button is not active and can not be selected!

TC17	Post	verify that uploaded post does not match with the displayed count	Posts count dissonance, regardless of created number of posts, there's an error in the proper count between displayed and uploaded number of posts! The key error is related due to the reason, that when you create a post - once it goes to the 'private' or 'public' posts gallery (it depends on the user's choice - what kind of post creates initially) and second time goes to the 'All' posts gallery. The explanation is accurate for the single post creation.
TC18	Profile	verify user can not redirect to the new post page after click on the new post button	'New post' button is not active and can not be selected!
TC19	Profile	verify that private post can be visible and accessible for another user who follows the profile	Private posts are accessible for the users, which follows the particular account. Private segments must be fully protected from the rest of the users!
TC20	Profile	verify user can like private post on followed profile account	The relevant case approved the same topic - private posts should be fully protected from the outer users!
TC21	Profile	verify user can dislike private post on followed profile account	Another action, that approved the same topic - private posts access should be restricted for the followers and available for its owner!
TC22	Profile	verify user can not select delete post confirm button no on the chosen item	Delete post confirmation button 'No' failed to the functional test, regarding the functional identical syntax with the delete post confirmation button 'Yes', which caused the exception: IndexOutOfBounds!

NOTE! Please keep in mind, that ID nomenclature for the test cases is created only for the necessity of the existing report! There's no connection with any bug tool or project tracking system, like JIRA, Firebug, TestRail, etc.
